Getting ahead of dementia

The handy guide to living well with dementia

A post diagnosis resource for
people living with dementia
and those who care for them.

Contents

Welcome

Welcome to ReMind UK's resource guide and directory. This is a compendium of curated information for people affected by dementia. Our aim is to improve access to services and increase opportunities for people to build support networks.

This guide is designed to be dipped in and out of so please use the information whenever you need it, however please be aware that we will be updating this publication each year and details are accurate at time of printing but can change at any time. Always seek guidance from a medical practitioner as to what is most appropriate for your personal circumstances and those of your loved ones.

ReMind UK is an independent charity offering holistic services spanning diagnosis, research and support all under one roof. We have over thirty years' of experience working with people affected by conditions leading to dementia. Our Memory Service is rated outstanding by the Care Quality Commission with skilled leaders and staff providing a service that other organisations can learn from. We lead and collaborate on essential research to improve health and wellbeing and find effective treatments for those impacted by neuro-degenerative disorders. We run courses and events to support people to live well with dementia and to connect people with a diagnosis and those caring for them.

This guide has been generously funded by the National Lottery's Building Communities Fund. As a charity we rely on the generosity of individuals, companies, trusts and foundations to support our work. To receive updates from ReMind UK including resources, events listings, news and opportunities to get involved, register your details by email at info@reminduk.org, give us a call on 01225 476420 or visit us online www.reminduk.org.

We hope you find this guide useful.

Melissa Hillier
Chief Executive Officer

“Remember, you are not alone. Your journey may be unique, but there are many others who have walked a similar path.”

Lisa Genova

What is dementia?

Dementia is a descriptive term which indicates a progressive medical condition affecting the brain. It may result in difficulties accessing memories, thinking clearly or decision-making, affecting behaviour, sense of location or speech and therefore impacting everyday life.

Dementia is not one disease, but a term used to describe many different conditions affecting how our brains work. For example Alzheimer's disease, Lewy Body dementia, semantic dementia, frontotemporal dementia, vascular dementia and Creutzfeldt–Jakob disease are all types of dementia.

You can find out more about different types of dementia and symptoms from ReMind UK's website or other specialist dementia organisations such as the Alzheimer's Society or Dementia UK. There is also condition specific information at the ReMind UK Centre, based at Royal United Hospital, Bath.

In the UK, 1 in 11 people over the age of 65 has a type of dementia, and 1 in 6 people over the age of 80. If someone is diagnosed with dementia under the age of 65, this is classified as 'young onset' dementia. If you or someone you know is affected by young onset dementia you can seek support and access an online community at the Young Dementia Network.

There is also support available from the Rare Dementia Support website.

There are around 950,000 people living with dementia in the UK, with that number projected to rise to 1.1 million by 2030.

Someone develops dementia every three minutes. It's estimated that two-thirds of people with dementia are living in the community and are likely to be looked after by an unpaid family caregiver.

Diagnosis

It is important to remember that a diagnosis of dementia does not define who you are as a person. You are still the same person you have always been, and there are ways to continue living a fulfilling life with dementia.

The symptoms of dementia may get worse over time, so it is important to get a diagnosis as early as possible because, with the right medication, support, care, and proper planning, individuals can enjoy life to the fullest for as long as possible.

A diagnosis of dementia, or any other condition that may affect memory, can be a life-changing experience and for some, receiving a diagnosis can be a difficult and emotional. It is normal to feel a range of emotions, including anger, fear, and frustration. For others, the diagnosis may bring relief after a long period of worry and feeling that something 'isn't quite right.'

Sometimes people are frightened about what lies ahead and/or they can feel embarrassed about having a memory problem or worry about what people will think about them or be nervous about public stigma. Because of these worries, some people prefer not to talk about their diagnosis, or cope by avoiding situations where difficulties might be highlighted.

For some the shock can be so great that they prefer to keep the experience to themselves. For others, talking can help and they may want to share the news with family and friends.

While all these reactions are understandable, they can lead to people who have been diagnosed feeling lonely, isolated, and confused. In addition to emotional challenges, a diagnosis of dementia can bring significant life changes. You may have to adjust your career, retirement plans, or daily routines. These changes may feel overwhelming, and it can really help to seek support from loved ones, healthcare professionals, and community resources.

It is important to remember that often family and friends care about you and there are people to support you during this time.

There are many resources available to help individuals and their families navigate this challenging time, including support groups, educational courses, counselling or listening services, as well as social prescription and community services.

With the right support and resources, it is possible to maintain independence, stay engaged in meaningful activities, and enjoy precious time with loved ones.

What to Expect

A helpful list of things to expect is available on the Alzheimer's Association website: [Just Diagnosed/Alzheimer's Association](#).

It is important to understand that when it comes to predicting how symptoms may progress, medical staff and clinicians can be limited in their ability to provide a precise projection. This is because there is huge variety in how quickly, or in what ways the functions of the brain will change over time.

The progression of symptoms will often depend on a variety of factors

that are unique to each individual case. Factors which may impact progression of symptoms include age, overall health, and the severity of their condition. In addition, the specific type of brain condition and external factors can also play a role, as well as whether the patient responds well to appropriate medical treatment and support.

While it can be frustrating not to have a clear projection of how symptoms may progress, it is important to remember that professionals are doing their best to provide the most accurate information possible based on available expertise and research. And remember many others are facing a similar situation.

ReMind UK's memory clinic diagnoses people and prescribes a person appropriate treatment. To support and follow up with people longer term we have developed other ways for people with dementia and their loved ones to receive ongoing support through a range of courses, events, groups, and peer support activities.

As a charity we need to raise vital funds every year to support all of this work.

Patients and their families can access lots of resources to help develop plans for the future. **This is Me** is a useful document from Alzheimer's Society which can be completed to help health care teams understand who you are.

When you receive a diagnosis, you can ask to be referred or self-refer to the Alzheimer's Society Dementia Advisor Service. They can talk this through with you and offer local support and signposting.

Living with dementia

It is important that you take steps to live as well as you can with the condition that you have been diagnosed with. To help live as well as possible with your diagnosis you might consider some of the following:

- Communicate with family and friends – find ways which suit you to tell friends, colleagues and acquaintances. Keep them in the loop – they are your support network.
- Access support and guidance around financial and legal issues.
- Seek awareness of available treatments and support.
- Manage symptoms medically and socially (social prescription).
- Make decisions and plan for future decision-making.
- Where eligible, take up the opportunity to participate in research.
- Find practical solutions to difficulties you may be experiencing.
- Access support to help cope with stress and anxiety.
- Identify useful products and equipment to help with daily living.

Being part of your community and making contributions to community initiatives can be very rewarding.

Dementia cafés, peer support groups, assistive technology, art and music therapy, movement, and physical activity can all play a role in helping people live better with memory conditions.

It is important not to feel isolated, groups help you socialise in a sympathetic environment.

My life, my goals

A practical guide full of hope to help you set and reach your goals, developed as a collaboration by Exeter University, Innovations in Dementia and Alzheimer's Society.

www.innovationsindementia.org.uk

AGE UK have produced a helpful list for daily living which can be accessed through the information and advice section on their [website](http://www.ageuk.org.uk).

General strategies include:

- Having a regular routine
- Keeping active
- Having 'the same place' to put things
- Breaking things down into small manageable steps
- Focusing on one thing at a time
- Reducing as many distractions as possible
- Getting support

Brain Health

Cognition refers to the mental processes and abilities associated with perception, attention, memory, and decision-making. As we age some cognitive decline is natural, but certain factors can speed up the process, such as chronic stress, lack of exercise, poor sleep, and unhealthy eating habits.

There are ways to improve and maintain cognitive function as well as develop coping strategies for cognitive difficulties.

An effective way to improve cognition is to engage in regular exercise which increases blood flow to the brain and can help improve memory, attention, and decision-making.

Getting enough sleep is also crucial for cognitive function. Sleep consolidates memories and provides essential time out to rest and restore cognitive function. The NHS offers very useful sleep advice on their [every mind matters web pages](#).

In terms of coping strategies, one effective approach is to break tasks into smaller, more manageable steps. This can help reduce feelings of being overwhelmed and make it easier to focus on one task at a time.

“The greatest glory in living lies not in never falling, but in rising every time we fall.”

Source: Long Walk to Freedom (1995)
by Nelson Mandela.

Additionally, practicing relaxation techniques and mindfulness can help improve cognitive function by reducing stress and increasing focus.

Finally, it is important to maintain a healthy lifestyle overall. Eating a healthy diet and avoiding smoking and excessive alcohol consumption and managing stress can all help to protect cognitive function.

Research indicates that keeping your brain active may also be beneficial.

Puzzles & Brain Games

If you enjoy puzzles, teasers, riddles and brain games here are a few suggestions.

Reader's Digest online

⊗ www.readersdigest.co.uk/fun-games/games-puzzles

Brain Workout Puzzle

The Alzheimer's Society can send you a monthly Brain Workout Puzzle Pack delivered straight to your door. They ask for a voluntary donation which suits you.

Caring

Taking care of someone with dementia can be challenging and overwhelming, which is why it is important to have access to support and resources, for everyone to remain healthy and resilient.

You may not think of yourself as a carer, particularly if the person with dementia is a partner, parent, or close friend.

Post-diagnosis support and care are crucial for the well-being of both the person with dementia and their family. You may need support to cope with symptoms and changes in behaviour. There will be bad days and better days, or days when you may not feel able to cope at all.

You may need to dig deep to find wells of patience, resilience, and understanding.

Services such as day centres, home support and support groups offer valuable space for rest, time to talk to people in similar situations, or for free time for yourself and much needed respite from caring, and time to share.

It is a good idea to:

- Register with your local carers centre or organisation.
- Take care of your own health and wellbeing.
- Make sure you're registered as a carer with your GP.
- Apply for a carers assessment.
- Check if you are eligible for benefits for carers.
- Find out about training courses that could help you.

Local Carers' Centres offer information, advice and support to unpaid carers – those looking after partners, friends or family members due to old age, illness, disability, mental health difficulties or addiction.

Carers can become exposed to an increase in normal levels of physical tasks and emotional stress which can put their physical health at risk. The national back pain charity, **BackCare** is working to help UK carers support their physical health and prevent problems before they arise.

At ReMind UK, we encourage you to refer yourself to your local Carers Centre, or support service to benefit from what's available. All local authorities or independent carers charities will offer different services depending on where you live.

We have not included information on Home Care Agencies, Nursing Homes or Residential Homes in this guide, but you can find guidance on these, as well as home care support at B&NES' AGE UK's comprehensive 'Your Guide to Later Life.'

At some point you may need some assistance. This may range from a companion to offer company, to full personal care at home.

Do not hesitate to ask for help if it will make your life easier.

"The only mistake you can make is not asking for help."

– Sandeep Jauhar

courses, events and activities

The ReMind UK Centre, based at the Royal United Hospital in Bath, offers a range of support opportunities for people affected by dementia.

Cognitive Stimulation Therapy is a seven-week program for people with mild to moderate dementia to stimulate memory in an interactive and engaging way. CST is evidence based and recommended by NICE (The National Institute for Health and Care Excellence).

Living Well with Dementia Courses are ten-week programmes to help support people following a diagnosis. Sessions aim to help people with dementia and carers understand and adjust to their diagnosis, helping them to live as well as possible. The courses bring people together to discuss and learn more. Because everyone is in the same boat, this helps people to feel that they are not alone and that they won't be judged. A Living with Dementia course can help to reassure people.

Dementia Courses for Carers. These are one or half day events for people looking after someone with a diagnosis. Expert speakers provide information about support services and practical advice and people can share their stories.

Chat, Make and Move Courses
Ten-session programmes of activity aimed at supporting those who are newly diagnosed and developing longer term local support groups. The courses help people affected learn new things, enjoy themselves, and participate in gentle exercise, creativity, and wellbeing activities.

We also offer a seasonal events programme of varied activity.

Come along on your own, with or without a friend or family member. You will be welcome.

Course feedback:

"This has really opened doors for me, it has been very therapeutic."

"I really enjoyed it. I loved the singing as well. Everyone is so friendly and kind. I would recommend it to anyone. It is the full package!"

"The ReMind UK Centre makes such a positive contribution to all of our lives, and we are very grateful for the opportunities you offer."

Top Tips

This section is a collection of top tips, curated by carers and ReMind UK's Lived Experience Advisory Panel.

- **Legal** – ensure you have Wills and you have power of attorney (PoA) – both for finance and, importantly for health. These are both now separate and were previously known as 'enduring'.
- **Medical** – do you have a good consultant who will guide you through? Have you got medication prescribed? Medication can help delay the onset of symptoms.

Make sure you get your eyesight and hearing checked. The RNIB can support. Ask your GP or private health care for hearing and eye tests. Persist in wearing your hearing aids.

Be sure to download the NHS APP on your phone. You can then see all your medical records and appointments in one place.

- **Falls** – prevention is key. See the NHS website.
⊗ www.nhs.uk/conditions/falls/

B&NES NHS has a Falls Ambulance for people over the age of 65 years who fall over at home. The Falls Rapid Response Team, includes a specialist paramedic and an occupational therapist.

- ⊗ <https://bathneshealthandcare.nhs.uk/clinics-and-treatments/falls-service/falls-service-support-and-information/>

- **Social services** – ask for a Care and Support Assessment by Social Services. For more info on carers rights and care and support assessments speak to HCRG group, and or your local carers organisation.

It's important they assess both of you as they can assess needs and register you as a carer with your GP. Contact your local authority or local carers centre to get a carers assessment.

Useful resources

This is Me

- ⊗ www.alzheimers.org.uk/get-support/publications-factsheets/this-is-me

ICE - First Response

Download emergency contacts on to your mobile phone.

- ⊗ www.firstresponsefirstaid.co.uk

- **Finances** – apply for an Attendance Allowance when you are ready – paint a picture of the worst day. Keep copies to send out as you will be asked for it frequently. Get help from Citizen's Advice Bureau if you are not sure – it is a long form! This is a gateway for some other benefits such as a discount on council tax.

The Disability package is like a puzzle... you need Doctors' notes, medical letters, certificates and blue badges, and you need to keep going with it all.

- **Give your GP Practice a copy of Power of Attorney (PoA) over health.** Keep a copy of your PoA in your bag, you will need it again and again. Also give a copy of it to the bank, even if it is a joint account.
- **Discuss things for the future** – you can agree and sign a RESPECT form with your GP – paramedics will then try to treat at home whenever possible (far better than hospital for dementia).
- **Prepare an Emergency Plan** in case something should happen to you – the carer. (Carers Centres may provide a pack). Get a Lions Club sticker for your front door – this alerts the Emergency Service that you are a carer.
- **Think about who can help** – neighbours, family and friends. Local support for carers may be available. The Alzheimer's Society can offer regular contact to support you. Local churches and village halls often offer something.

- **A healthy diet and hydration are important** so check and keep a note of what your loved one is eating and make sure they drink enough – this is essential if they are prescribed medication. Look out for any unmet causes which may influence behaviour such as constipation, pain, temperature.
- **Don't put your life on hold. Seize the moment.** Getting out in the fresh air, taking exercise, seeing people and doing things help to delay the progress of the disease. There are lots of ways to stimulate your brain – Singing for the Brain is just one and it can be surprisingly uplifting. Find groups or activities and peer support opportunities which you enjoy.
- **Take time out.** Don't beat yourself up. Both of you should be able to relax. Be kind to yourself and each other. If the short-term memory is failing, dig into the past and talk about things that happened before. This part of the memory is likely to be functioning better. I made a book of memories and photographs to enjoy together.
- **Consider a free home fire and safety visit,** offered by Avon Fire and Rescue or your local Fire Service.
- **Create one key overview document with a list of contacts** for dentists, doctors, medications. A good starting point for this is a 'This is Me' document available from the Alzheimer's Society website.

Leave it in an obvious place and copy it a few times.

“Bread and butter, love, and warmth
I love toasted tea buns!
Warm slippers and grandmothers.
The person who has
never been foolish
Is the most foolish.
If music be the food
of love PLAY ON
In the company of good friends
One is never alone”

A poem co- created at our Toast, Tea & Poetry Group
